

Can Corel Vector be used offline?

- AfterShot

PRO subscribers can use the application without an active internet connection at full volume. However, every fifteen days it checks to see if you have an active subscription, and you need to connect to the internet for that. Everything except web fonts, accessing the Corel Vector Cloud, libraries and templates work in offline mode.

If you are a legacy user you don't need to worry about a loss of your internet connection. In this case, you can still download your files as a backup.

Please notice that this is a PRO feature.
