

InstallShield setup file in self-extracting Zip files for Software Installation

- WinZip
- WinZip Self-Extractor
- WinZip Enterprise

InstallShield changed how **setup.exe** launched the **_isdel** routine, so that it became **transparent** to the self-extractor. Installshield seems to have addressed the issue with the **/SMS** switch.

The change made it so that the self-extractor does not *see* the ISDEL program being launched, due to the way that the setup program itself *spawns* the process. However, we've heard from a few users who have overcome the problem by including the **/SMS** switch with the command to issue.

Example:

.\setup.exe /SMS

Note: /SMS must be specified in uppercase
