

Importing video from an iPhone 3GS into Studio 14

- Pinnacle Legacy

?Video files on an iPhone 3GS may not import properly using the Studio 14 Importer. These files can still be used in Studio 14 using the following method.

Step 1: Move the file(s) to a location on your local hard drive. The location doesn't matter, it is just important that you can find it later.

Step 2: In the Edit mode of Studio 14, open the desired file. You can do this by clicking the "Select video files from a different folder" icon in the Album and then browse for the file to open. Once opened, the file will be available for use in the Album.
