

Can I use SmartSound with Studio 14

- Pinnacle Legacy
- We have consolidated our MusicGenerator tool to a plug-in architecture in order to provide a standardized robust interface, called SoundStage.
- Any third-party manufacturer who is interested can work with us to write and distribute a plugin for this architecture.
- We provide a free SDK, and support where applicable, to interested third parties for such efforts.
- In terms of SmartSound: We have been in contact with SmartSound, and they have informed us that their plug-in will not be adjusted for Studio 14 at the present time.

Workaround

There is a workaround available using SmartSound Express Track. For information on how to use this workaround please see this FAQ:
