

DVDit Pro HD supported audio files

- Roxio Legacy

DVDit Pro HD supports the following audio file formats:

File format	Filename extension	Notes
AIFF	.aif, .aiff	Requires QuickTime. (http://www.apple.com/quicktime/download/) Uncompressed files only.
Dolby Digital	.ac3	Multi-channel audio files are supported.
MPEG-1 Layer 2	.mp1, .mp2, .abs, .mpa	
MPEG-1 Layer 3	.mp3	
WAVE audio	.wav	
Windows Media Audio	.wma	Only WMA files that are not copy-protected are supported.

Note: For best results, use 48 kHz, 16-bit audio.

Files can contain a single stream of mono or stereo audio (except Dolby Digital audio, which must be stereo or multi-channel). When you burn a disc, DVDit Pro HD transcodes non-compliant audio to PCM or Dolby Digital, depending on the transcoder settings.

DVDit Pro HD does not need to transcode DVD-compliant audio, which reduces the time it takes to burn discs.

DVDit Pro HD supported audio for DVD

Audio format	Sample rate (kHz)	Sample size (bits)	Audio Channels	Bit rate (Mbps)
PCM (AIFF, WAVE)	48	16	Mono Stereo	Mono: 0.8 Stereo: 1.6
