

How to use Disc Spanning in Toast

• Roxio Legacy

If the files and folders you are recording exceed the capacity of a single CD or DVD, Toast will automatically span this data across multiple discs for Mac or PC.

- 1. Click on the **Data** tab in the Toast window.
- 2. Under *Formats* select **Mac Only** or **Mac & PC**. (For Toast 7 users, Disc Spanning will only work with **Mac Only** option)
- 3. Add your files to the main project window, the left drawer will display information about the number of discs you will need for recording. Click the CD/DVD pop-up menu next to the Space indicator to adjust the information for CD or DVD media.
- 4. Record your disc.
- 5. Toast will prompt you to insert each blank disc while recording.
