

General Slideshow solutions

- Creator NXT

Since creating a slide show is a simple process, there are some basic things you should try:

1. Install the latest Windows Update. While it's important to keep your operating system up to date, if you were to install only one update at a time, we'd recommend DirectX first.
2. Make sure that you have plenty of space. As a general rule, you should have enough space if you double the size of your target media. For example, if your slideshow is going to a 4.7 gig DVD, then about 9.4 gigs of free disk space will be needed.
3. Update your video card drivers from your video card manufacturer. To find out the manufacturer:
 - ◆ Windows XP: Go to **My Computer** and choose **Properties**.
 - ◆ Windows Vista: Go to **Start --> Control Panel--> System and Maintenance --> Device Manager**.
 - ◆ Click on the **Hardware** tab.
 - ◆ Select **Device Manager**
 - ◆ Double-click **Display Adapters**. Your video card make and model is displayed.
 - ◆ To find out the driver details (such as version), right click on the make and model under **Display adapter**, and select **Properties**.
4. Make sure you have the latest updates for your software:
