

Project buildToDevice() AuthorScript call failed" when trying to burn a disc

- Creator NXT

You can work around this issue by creating your project as a disc image and then burning the image.

To burn a disc image of your project from MyDVD:

1. Click on red **Burn Project** button.

- In the *Burn Project* window, deselect "Burn to Disc" and then select "Save disc image file".

- Click the **Browse** button.

- In the *Save to image file* window, choose the folder you want to save your disc image and choose a file name.

- Click **Save**.

- In the *Burn Project* window, click **Burn**.

Once you have created a disc image file of your project, you can then burn it to a disc by doing the following:

1. Insert your blank disc.
- Click on the *Data - Copy* tab in Creator.

- Under the *Create* heading, select **Burn Disc Image**.

- Under "Choose Image", click **Browse**.

- In the *Open* window, navigate to the disc image of the project you saved and click **Open**.

- Under "Copy To", select the drive that has your blank disc.

- Click the green **Copy** button to burn your disc.
