

Snow Leopard updates for TiVo in Toast and Popcorn

- Toast

Users who upgrade to Mac OS X 10.6 and have an older version of Toast 9, Toast 10, or Popcorn 4 installed will be unable to launch TiVo Transfer, part of our TiVoToGo for the Mac solution.

To resolve this issue, users should update to the latest version of their respective Toast or Popcorn application. To check if you are running the latest version, and to download product updates click **Check for Updates** from the *Help* menu.

If an update is available for your product, you will be prompted to download it. If there is no update available, then you are running the latest version.
