

# **Customizing the Property Bar in WordPerfect**

• WordPerfect Office Suite

The property bar displays different controls depending on the type of object that is selected. Buttons can be added to the property bar. The appearance of property bar buttons can be changed so that they display with text only, pictures only, or with both pictures and text. The pictures on the Property bar can be edited to be used for a property bar button. It is even possible to change the location of the Property bar.

And if necessary, the original settings of the property bar can be restored at any time.

# To change the location of the property bar

- 1. Click **Tools Settings**.
- 2. Click Customize.
- 3. In the **Customize settings** dialog box, select the **Property bars** tab.
- 4. Choose a property bar from the **Available property bars** list.
- 5. Click Options.
- 6. In the **Property bar location** area, select one of the following buttons:

Left docks the property bar to the left side of the document window

Right docks the property bar to the right side of the document window

Top docks the property bar at the top of the document window

Bottom docks the property bar at the bottom of the document window

Palette creates a floating property bar that can be moved anywhere along the screen
