

Access denied you do not have the rights to do this when saving a WordPerfect wpd file

- Corel Other

The "Access denied: you do not have the rights to do this" prompt is often a result of network issues. The file that is being accessed is from a shared drive from a network. Make sure that full rights or permissions are granted to the save folder.

It is possible that the file is open in another Office application such as Microsoft Office Word. If so, the file will only be in a read-only mode and you will not be able to write or make any changes to it.

Another possibility is that the file is being accessed from the shared drive at the same time you are attempting to save it. Again, it will only be in a read-only mode and you will not be able to write or make any changes to the file.

To resolve this issue, restart WordPerfect and close any other open word processing programs on your system. If the problem persists, restart your computer.

In order not to lose the changes you have done on the document, save the file with a unique filename which should not be the same as the original filename. You may then access the file later and continue to make changes to it.
