

How to crop an image to a shape (masking)?

- Gravit Designer Desktop App

Please have a look at the following video, where you can see different ways on how to crop an image to a shape:
<https://cl.ly/7c4f0255746a>

1. Move the image over the shape and drag the image to the shape in the Layers list.
2. Move the shape over the image, select both and pick "Mask with shape" after a right-click.
3. Move the image over the shape, select both click on "Clip" in the toolbar.

Please note that the layer order matters and the image needs to be above the shape in 1 and 3, and the shape needs to be above the image in 2.
