

Differences between WinZip Self-Extractor and the Personal Edition

- WinZip
- WinZip Self-Extractor

WinZip automatically includes/contains WinZip Self-Extractor Personal Edition, which has a subset of the features that are in WinZip Self-Extractor.

Features available in WinZip Self-Extractor that are not available in the Personal Edition include:

- Create smaller self-extracting files from Zip files (.zip or .zipx) created with LZMA, Jpeg, WavPack, PPMd and Enhanced Deflate compression methods
 - Features to allow for the prompting of administrator privileges
 - Features to automate and customize software installation, using a specific icon, user-defined text (in certain dialogs), and delete temporarily extracted files after running a setup program
 - Include sensitive information protected with 128- and 256-bit AES encryption
 - Ability to run a command when the unzip operation completes
 - The option to create self-extracting files from the command line
 - Self-extractors can be created with English or German messages
 - Ability to automatically extract files when the self-extractor file is run
 - A Wizard to simplify the process of building self-extracting files
 - Support custom icons, splash screen and about-box text
-
