

Differences between WinZip Self-Extractor and the Personal Edition

- WinZip
- WinZip Self-Extractor

WinZip automatically includes/contains <u>WinZip Self-Extractor Personal Edition</u>, which has a subset of the features that are in <u>WinZip Self-Extractor</u>.

Features available in WinZip Self-Extractor that are not available in the Personal Edition include:

- Create smaller self-extracting files from Zip files (.zip or .zipx) created with LZMA, Jpeg, WavPack, PPMd and Enhanced Deflate compression methods
- Features to allow for the prompting of administrator privileges
- Features to automate and customize software installation, using a specific icon, user-defined text (in certain dialogs), and delete temporarily extracted files after running a setup program
- Include sensitive information protected with 128- and 256-bit AES encryption
- Ability to run a command when the unzip operation completes
- The option to create self-extracting files from the command line
- Self-extractors can be created with English or German messages
- Ability to automatically extract files when the self-extractor file is run
- A Wizard to simplify the process of building self-extracting files
- Support custom icons, splash screen and about-box text
