

Studio 14 crashes on launch if M-Audio Producer USB microphone is connected

- Pinnacle Legacy

In some cases, Studio 14 may crash during start up if an M-Audio Producer USB headphone is connected to the system. We apologize for this inconvenience. The solution in this case is to disconnect the microphone while Studio 14 is launching. If you need to use the microphone in Studio to record a voice-over, you can reconnect it after Studio has started.
