

Large images fail to preview when used in the Classic Title Editor in Studio 14 or 15

- Pinnacle Legacy

In some cases you may notice that images fail to preview when using them as pictures or backgrounds in the Classic Title Editor, they will only preview as a solid black image. This can occur if you are working with an image that has larger dimensions. For example a 4000x4000 image would not preview properly. The resolution for this issue is to use the Motion Title Editor instead. The larger images should work properly in this editor.
