

Studio 16 hangs or crashes after burning a disc image

- Pinnacle Legacy

When trying to use the Burn Image option in Studio 16 to burn a disc from a previous created image, you may encounter a crash or hang of the Studio application after receiving the message: "The disc burn was successful! You may now remove your disc from the burner." If you run into this problem, please note that the disc that you created should still be playable. To avoid this issue use the Burn Disc option which creates the image and burns the disc in one step.
