Motion Title Crashing Problems

- Pinnacle Legacy

In some rare cases it is possible that Studio might crash when working with Motion Titles. Here are two possible failures:

Issue #1: Studio crashes in the Motion Title Editor when trying to edit a specific line of text.

If this happens, try completely deleting the problematic text layer and recreate it. If this fails, try to recreate the entire title.

Issue #2: Studio crashes when clicking on a title from the project timeline.

If this happens, delete the entire title and recreate it.
