

MP3 Files Shortens when imported to Studio 16

- Pinnacle Studio

This error can happen if you have imported mp3 files with sample rate of below 32 kHz.

To check the sample rate of the MP3 file in Studio >> Right click on the file >> Choose Display Information >> Look under Audio >> Sample Rate. If the file is below 32 kHz you can try the following:

Convert it by using a 3rd party converter (you can search online for free audio converter). We do not endorse any particular converter.

- Make sure to convert it to higher sample rates (above 32khz). Same file format.
- You can also convert into .wmv or .mp4 files.

If your purchased the file online, please check if there?s an option to change the quality it (Choose 32khz and Up). Then re-download it.
