Does Studio support capture closed captioning

- Pinnacle Studio

Studio is not capable of capturing closed captioning. Closed captions are captions that are hidden in the video signal, invisible without a special decoder. The place they are hidden is called line 21 of the vertical blanking interval (VBI). Studio, like most video capture software, is not capable of capturing from this line.

You can, however,title overlays which will appear like closed captioning when viewing your videos.
