

## How to print multiple photos

- Roxio Legacy

To print multiple photos per page, follow these steps:

- Once you have edited your photo in PhotoSuite, choose **Print** from the *File* menu.
- In the *Layout* box, select **Multiple photos per page**.
- In the *Category* box, specify the paper type.
- In the *Template* box, specify the template to be used. The template determines how the photos are arranged on the page.
- To fill each page with multiple copies of the same photo, select **Fill each page with the same photo**. The number of times the photo appears depends on the template you select.

Tip: To specify the maximum or minimum number of copies of each photo, select **Repeat each photo** and specify the number of times each photo appears.

- Choose whether to **crop the photo to fit the placeholder** in the template. If the photo proportions are not the same as the proportions of the template, the application can crop the photo to fit the print area, or leave part of the print area blank. The first option may result in a larger photo.
- To rotate the photo to fit the placeholder, select **Auto-rotate to fit the placeholder**.

Tip: For more customization, click **Advanced Options**. For more information about the advanced options, click **Help** on the *Advanced Print Multiple Settings* dialog box in the lower right corner.

- Click the **Print** button to print your photos.
