Installing Toast Updates

- Roxio Legacy

1. Double-click on the **Toast Update** file you have downloaded from Roxio web site. The *Toast 8 Update v8.x* window appears on your desktop.
2. If you wish to keep the current version on your computer as well as the newer version, rename the current version in the **Applications** folder using the Finder before proceeding.
3. Drag the **Toast Titanium** and/or other applications from the *Toast Update* window into the**Toast Titanium** folder on your hard disk (probably located inside the **Applications** folder). The message saying "A newer item named 'Toast 8 Titanium' already exists in this location. Do you want to replace it with the older one you are moving?" will pop up. This will install the update and not the previous version already installed on your computer. Click **Replace** (or**Yes**) to install the update.
4. In the **Toast Titanium** folder on your hard disk, double-click the **Toast Titanium** application to launch Toast. Follow the on-screen instructions.
