

How to use Disc Spanning in Toast

- Roxio Legacy

If the files and folders you are recording exceed the capacity of a single CD or DVD, Toast will automatically span this data across multiple discs for Mac or PC.

1. Click on the **Data** tab in the Toast window.
2. Under *Formats* select **Mac Only** or **Mac & PC**. (For Toast 7 users, Disc Spanning will only work with **Mac Only** option)
3. Add your files to the main project window, the left drawer will display information about the number of discs you will need for recording. Click the CD/DVD pop-up menu next to the Space indicator to adjust the information for CD or DVD media.
4. Record your disc.
5. Toast will prompt you to insert each blank disc while recording.
