

Copy a Data Disc

- Creator NXT
 - Copy a data disc on CD, DVD or Blu-ray by going to the Creator Home screen. Click the *Data-Copy* tab and choose **Copy Disc**.
 - Insert the disc you want to copy in your computer. Creator will tell you what type of disc it is (e.g. CD/DVD, single or dual layer, etc.) below the *Copy From* box.
 - Check your copy options by clicking the **Options** button at the upper right. Note: for data discs, it's best to check off the "Verify copied data discs" box.
 - Choose your output drive using the *Copy To* drop-down menu.
 - Click the green arrow **Copy** button to start the process.
 - Wait for the temporary disc image to be saved to the drive you selected in step #4 (or your hard drive if that is the only drive you have).
 - Insert a blank disc into your computer and click 'OK' on the Roxio Creator window.
 - Wait for the disc to burn; you can watch the progress or let it continue in the background as you work on other tasks.
 - Once your project is complete you can click **Finish** to close the program or **Make Another** to burn a copy to another disc. You can also click **Label Disc** to go directly to Creator's Disc Labeler program.
