

Cannot save an .iso disc image of a DVD-R DL over 3.5 GB using Roxio Home

- Creator NXT

To free up the drive, follow these steps:

1. With the **Save Image** application still open, remove the DVD from the drive.
2. Click the **Burn** button.
3. When prompted to insert a blank disc, click **Cancel**.

To create a disc image file over 3.5 GB from your DVD-R Dual Layer Disc, use the DVD Global-Image (.gi) format instead. This is available by doing the following:

1. When all your files have been added in Data Disc, choose **Browse...** under the **Destination Selection** window.
2. In the **Select the destination drive of folder** window, choose **DVD Global-Image (*.gi)** from the **Save as type:** drop-down menu .
3. Click **Save**.
4. Click the **Burn** button to save your disc image.

NOTE: If you have Creator Classic or Disc Copier installed, you could also use either of those applications to create a disc image file.
