

8004520c or 80040207 Error while Encoding Movie

- Creator NXT

Generally, defragmenting your hard disk will resolve this issue. To defragment your computer:

1. Go to **Start--> Programs --> Accessories --> System Tools --> Disk Defragmenter**.
2. When the *Disk Defragmenter* window opens, choose **Defragment**.

If defragmentation doesn't resolve the issue, burn your project as a data file, and then burn your project as a data disc using Disc Copier or Creator Classic. To create a disc image/data file:

1. After clicking the **Burn** button, the *Burn Project* window opens.
2. You have two data burning options:
 - ◆ Image file - this option will save your project as an .ISO file. To burn this file you will need to use the **Burn Image** option in Creator's *Copysection*.
 - ◆ Folder Set - burning a folder set will create a Video_TS folder that you can burn using Creator Classic. Burning a folder set to DVD will create a fully functional DVD. Do NOT rename the Video_TS folder other wise it will not play! Simply place it in a folder that is the name of your project if you need to keep track.

Tip: Either of the above options are a great way to not only back up your projects, but make multiple copies to reduce encoding time!
