There is a delay between what's on TV and what's in the preview in Roxio Game Capture HD PRO software

- Corel Other

Issue:

There is a 2-3 seconds delay from the action on my TV to the display on my computer. How can I fix it?

Resolution:

This is actually by design. With the hardware encoding we implement with Roxio Game Capture HD PRO, it is normal to have 2-3 seconds delay from the action on your TV to the display on your computer.
