

How to Import Video From an Existing DVD or VIDEO TS Folder in Toast

- Toast

You can import video (such as specific titles or chapters) from an existing DVD using the Toast media browser. Once imported into Toast, you can then burn to a new DVD, or export into DV, DivX or other formats for re-editing or playback on other devices or systems.

NOTE: This will not work for copy-right protected or commercial DVDs.

To import video from a DVD:

1. Insert the DVD into your drive, mount a DVD disc image, or drag the *VIDEO_TS* folder from the DVD onto your desktop.

- Launch Toast and select the **Video** tab and choose **DVD-Video** in the *Formats* drawer.

For Toast 9 users: Select the **Convert** tab and choose **VIDEO_TS Folders** in the *Formats* drawer.

- Click on the **Media** tab in the drawer and choose **DVD** from the pop-up.

Content from any DVD in your drive or on your desktop will be displayed in a list. The Media Browser can import non-encrypted DVD content, such as discs created in iDVD or Toast, or discs recorded in set-top DVD recorders.

Non-encrypted content will show a small thumbnail image next to it, whereas encrypted content will show a small lock symbol.

- Choose a specific DVD and you will see the titles and/or chapters on the DVD.

- Drag and drop a title or individual chapter into the Toast *Video* window.

To export video for editing:

1. Select one or more titles or chapters that were added into the Toast *Videowindow*.

- Click on **Export** at the bottom of the *Toast* window.

- Choose your desired export format.
