Capturing web video with Toast 10

- Toast

1. Launch the Media Browser in Toast by going to *Window* -> **Show Media Browser**.

- From the *Media Type* pop-up menu, choose **Web Video**.

- Open the webpage that contains the video you want to capture.

- Capturing the web video:
    - If the video plays automatically when the page is launched, Media Browser will automatcially begin capturing the video.
    - If the video doesn't play automatically, you will need press the **Play** button on the web video to begin recording.

      Note: You will not be able to record only a section of the video. Once the video is launched or playing, Media Browser will begin downloading the entire video.

- Once the video has been captured into the Media Browser, add it to a video project and treat it like any other video clip where you can trim, rename, convert and/or burn.
