Corel Digital Studio 2010

Patch Name	OS	Languages	
Corel Digital Studio 2010 Service Pack 2 Notes: This patch is highly recommended for all users. It includes the following fixes:			
<ul style="list-style-type: none"> • Major performance improvements - among other improvements, the application no longer hangs during cataloging when certain video file formats are found • Printing disc labels - now includes support for several brands of label materials, making it easy to align the labels when printing. Simply select the "Commercial" option and choose your media type • Create mode projects - month name on calendars no longer appear slightly in the spiral binding area; the first page image in photo books now line up correctly in the cover window; vertical collages print correctly; the option to start calendar weeks on Monday instead of Sunday now work in all languages • Chinese-Traditional language in WinDVD - unreadable characters no longer appear in the user interface • Photo date - pictures from cameras that do not set "date taken" in the file header will have this correctly added 	Windows	· English · Deutsch · Français · Español · Italiano · ??? · · Nederlands · ???
