How to add plug-ins to PaintShop Pro

Most plug-ins for PaintShop Pro will automatically show up under **[Effects]** / **[Plugins]** after installation. If you can't see it in the menu, you can manually add the plug-ins to PaintShop Pro by following these steps:

1. First, make sure you are in the Complete workspace by going to **File > Workspace** and selecting Complete.
2. Click on **[File]** at the top of the PaintShop Pro.
3. Go down to **[Preferences]** / **[File Locations]**.
4. Find and select **[Plug-ins]** from the list, then click on the **[Add]** button. Make sure Enable is checked under Folder options.

5. ?Navigate to the folder where the plug-in is installed* and click **OK**.
6. You should now see the plug-in under **[Effects]** / **[Plugins]****

We also have a video tutorial showing how to install plugins for PaintShop Pro:

<https://learn.corel.com/tutorials/installing-plugins-for-paintshop-pro/>

*Contact Corel support if you don't know where the plug-in folder is. Below are a couple examples of the plug-in folder paths:?

- Topaz Detail plugin - C:\Program Files (x86)\Topaz Labs\Topaz Detail 3
- Athentech Perfectly Clear - C:\Program Files\Athentech\Perfectly Clear Plug-in PS V3

A few plugins show up elsewhere in PaintShop Pro. For example PhotoZoom will be available in **[File] / **[Export]**?instead.
