WordPerfect Office X8: Error appears when trying to access newly created folder

- WordPerfect Office Suite

When using WordPerfect in Windows 10, an error may be shown when accessing a newly created folder. This can occur if a folder is created in Windows Explorer while a WordPerfect file dialog is open.

In this case, the folder name shows as "New Folder" in WordPerfect instead of the name provided by the user. Double clicking on "New Folder" in WordPerfect causes an error to be displayed.

If the folder name shows as "New Folder" in WordPerfect after the folder is created and named in Windows Explorer, press F5 on the keyboard to refresh the display and show the correct folder name.

Clicking View, Refresh in the display.
