

## **Publish to PDF is not working as expected**

- WordPerfect Office Suite

When publishing some documents, the PDF file may not be usable. The publish activity seems to complete successfully, but when the PDF file is opened it appears that it is simply a blank page or pages. Scrolling through the PDF file does not work.

This issue has been reported to our engineering team.

In the meantime, open the WordPerfect Print dialog, select a different printer and click Close. Re-publish the PDF, using the default settings and overwrite the previous file.

At this point the PDF may publish correctly.
