

VideoStudio: Error "Convert Step Got Problems"

- VideoStudio

When making a DVD out of your project, with menus, one may encounter an odd message when attempting finalize the project and burn to disc.

This is a tricky one to troubleshoot, and there is no real solution for it currently. There has never been any clear indication why this error occurs, as it does not happen on every disc project, or burn attempt. The most that we can suggest, is to try to create the disc, without a menu, or render the project to file (MP4, MPG, etc), then use VideoStudio MyDVD to create the disc, with menus.
