

Load from stream error in Corel VideoStudio Pro X4

- VideoStudio

?

When launching VideoStudio Pro X4, the error "load from stream error" will pop up on the screen preventing the application from loading; this could be due to corruption of the file library in VideoStudio.

Please close VideoStudio, go to Start Menu, and type this on the search field (on Windows Vista/7) or Run command (on Windows XP): **%appdata%**

Hit the enter key to open the Application Folder. Inside the Application folder, go to *Ulead Systems* folder > *Corel VideoStudio Pro* folder and rename *14.0* folder."

When you launch VideoStudio again, it should launch correctly.
