

VideoStudio: Troubles importing MTS files in VideoStudio running on Windows 7

- VideoStudio

AVCHD (.MTS, .M2T, .M2TS, .MPG) files with AC3 audio is only supported on Windows 8 and 10, and are not natively decoded within the Windows 7 OS. As a workaround, you can try installing additional third-party codecs into your system.

Please Note ? This practice is not recommended and should be attempted at your own risk. Although there would be no damage to your system or files by performing this action, Corel does not support, nor would be able to assist in further troubleshooting, if the tactic does not work.
