

How to Pan and Zoom the video being played in WinDVD Pro 2010

- WinDVD

1. In order for the Zoom in and Zoom out to work, you need to use the alpha numeric keys from your keyboard (below the function keys); the Zoom in/out will not work using the numeric keys from the keypad (right-side of the keyboard).

- To activate Zoom-in, press and hold CTRL key on your keyboard and press Plus {+} key (below F10 function key). Press the Plus key again to zoom-in further.
- To activate Zoom-out press and hold CTRL key on your keyboard and press Minus {-} key (below F9 function key). Press the Minus key again to zoom-out further.

2. In order to Pan a video or use the Panning feature, first you need to use the Zoom in function or Zoom into the video. Once the video zooms-in, the mouse cursor will become a hand, which activates the Pan function. You may now drag the video position in the display area.
