

Installing True Type Fonts for use in CorelDRAW®Graphics Suite X4

- CorelDRAW Standard

The True Type font engine is an integral component of :

Microsoft® Windows® XP

Microsoft® Windows® Vista

Therefore, a third-party font manager is not required to use True Type fonts in any application running in these Windows environments. True Type fonts are installed to and accessed from the WINDOWS/FONTS folder in Microsoft Windows. CorelDRAW® X4 will access True Type fonts from this location.

Note: Installing an excessive number of Fonts (+500) may tax system resources, hinder performance and affect the operation of Windows.

Installing True Type Fonts to Microsoft® Windows® XP and Microsoft® Windows® Vista:

1. Click Start | Settings | Control Panel
 2. On the left side of the screen click on Classic View
 3. Double-click the Fonts icon
 4. Click File | Install New Font
 5. Insert the appropriate DVD-ROM
- Click the DVD drive from the Drives list box and double-click the folder that contains the desired fonts, i.e. X:\Extras\Content\Fonts\TrueType\
6. Select the fonts to be installed and click OK

Installing Extra Fonts:

1. Click Start | Settings | Control Panel
 2. On the left side of the screen click no Classic View
 3. Double-click the Fonts icon
 4. Click File | Install New Font
 5. Insert the appropriate CorelDRAW CD-ROM, or DVD.
 6. Double click on the Fonts folder
 7. Select the fonts to be installed and click OK
-
