

# WinDVD Pro: How to set an alternate audio source for playback

• WinDVD Pro

### Cause

There are some instances where the need to change the default output device is warranted, in order to hear audio from your application. Below are various methods of changing the default device.

## Method 1: Using the Sound flyout

The simplest way to change your playback device in Windows is to select it from the *Sound* flyout. Click or tap on the sound volume icon from the system tray, and then click/tap on the current playback device.

The *Sound* flyout then shows you all the playback audio devices that are available for you to use. All you have to do is to select the one you prefer from the list.

## Method 2: Using the Settings app

Similarly, you can also choose what audio device you prefer to use for playback, from the *Settings* app. However, this method involves a few more steps. Start by opening the Settings app: a fast way is to click or tap on its button from the *Start Menu*.

In the *Settings* app, navigate to *System*, and then to *Sound*. On the right side of the window, click or tap on the currently selected playback device under "*Choose your output device*."

The Choose your output device list from the Settings Sound section

The *Settings* app should show you a list of all the audio playback devices available on your system. Select the one you prefer.

← Settings		-	C	×
යි Home	Sound			
Find a setting	Output	1		
System	Choose your output device			
	ASUS XG32V (NVIDIA High Definition Audio)			
🖵 Display	Realtek Digital Output (Realtek High Definition Audio)	than the one		
다) Sound	Speakers (Realtek High Definition Audio)	anced sound		
Notifications & actions	Device properties			
	Master volume			
2) Focus assist	۵») —	100		
O Power & sleep	▲ Troubleshoot			
- Storage	Manage sound devices			
B Tablet mode	Input			

**NOTE:** There are also slightly faster ways to get to the *Sound* section from the *Settings* app. For instance, you can use the search, or you can right-click or press and hold on the sound volume icon from the system tray, and then click or tap on "*Open Sound settings*."

A faster way to open the Sound settings in Windows 10

## Method 3: Using the Sound settings from the Control Panel

You can also use the classic *Sound* window to change the default playback device on your Windows 10 system. However, getting to it is a bit more cumbersome than it used to be in the past. Open the Control Panel, navigate to *Hardware and Sound*, and click or tap on *Sound*.

The Sound link from the Hardware and Sound section in the Control Panel

This action opens the Sound window, where you set your default audio devices.

🌖 Sound	ł					×		
Playback	Recording	Sounds	Communica	ations				
Select a playback device below to modify its settings:								
	ASUS NVIDIA Ready	(G32V A High De	finition Au	dio	ŕ			
	NVIDIA NVIDIA	A Output A High De ugged in	finition Au	dio				
	NVIDIA NVIDIA	A Output A High De ugged in	finition Au	dio				
	NVIDIA NVIDIA	A Output A High De ugged in	finition Au	dio				
0	Speak Realte Defau	ers k High De It Device	finition Au	dio		,		
<u>C</u> onfi	igure		<u>5</u> 6	t Default 🛛	<u>P</u> roperties			
			OK	Cancel	<u>A</u> pply			

In the *Playback* tab, you are shown all the playback devices that are available on your Windows computer. Each system is different, and what you see reflects that. You can also see which devices are actually available. Some devices might not be plugged in, so they are greyed out. A green checkmark indicates the current default device.

To choose another audio device as your default playback device, click or tap on it, and then the Set Default button.

Choosing the default playback device in the Sound window

The selected device is now your default playback device in Windows. All playback audio is now routed through that device.

The *Sound* flyout then shows you all the playback audio devices that are available for you to use. All you have to do is to select the one you prefer from the list.
