

WordPerfect Office User Interface Languages

- WordPerfect Office Suite

Q: What Languages are available for the WordPerfect Office user interface?

A: WordPerfect Office UI is available in English and French

The user interface language is selected at the time of install and is based on the display language of Windows. If Windows is in English, then WordPerfect will default to installing in English also. The same is true for French.

The User Interface Language is the language used in the menus, dialogs, and help of WordPerfect Office.

NOTE:

Having one language set as the user interface language does not prevent you from writing in another language or from using writing tools (spell check, for example) for that other language.
